

Twelve Strong Reasons Why to Purchase the Defender™

User Size

Seat and Handlebar adjustments both move up/down and fore/aft insure that this bike truly fits all riders from 4' to 7' in height.

Frame Construction

Strong 3" x 1.5" box tubing with 1/8" thick steel walls. Robotic, TIG welding delivers unsurpassed durability (and great looks).

Adjustments

Riders can fine-tune their seat and handlebar workout position in "micro-increments". Adjustments are secured by stainless steel stud, which is sweat and damage resistant.

Ride Simulation

Replicates the body alignment, posture and hand positions of the hybrid, mountain and road bike.

Flywheel

Bodycycle is the only manufacture to incorporate an "alloy" (not cast iron) flywheel, which is precision ground and balanced to 42 pounds. Precision grounding delivers the smoothest ride available while increasing the longevity of the all drive bearings.

Drive Train

Kevlar V-Type reinforced belt (instead of chains over sprockets) delivers a quiet, virtually maintenance free system.

Variable Resistance System

With half as many parts as competitors and no cables to ever adjust, the patented BodyCycle braking system is virtually maintenance free.

Safety Imperatives

"Free-Wheel" design allows users to "coast" while flywheel moves to create a safe, learning environment for beginners or youth.

Emergency stop is quickly achieved by simply pushing down the brake. An impact and scratch resistant ABS guard encloses 100% of the moving parts within the drive train.

Quality Standards

The BodyCycle line proudly displays the "ISO-9002" mark of quality. Our product line is manufactured exclusively with US and Canadian parts in our state-of-the-art Montreal, Canada plant.

Required Maintenance

The least maintenance of any bike on the market. Just two drops of oil on the brake system every XXX hours and simple clean up after each class (Windex or any glass cleaner - no chrome polish).

Sweat Control

The combination of the sweat guard over the flywheel and cover over the drive train greatly reduces the burden of clean-up or penetration of sweat into cracks/crevices.

Warranty

Product quality and support is a cornerstone at Bodycycle resulting in the best warranty anywhere. 5 year warranty and 2 years on mechanical parts.
